UNIVERSITAS NUSA PUTRA
FAKULTAS TEKNIK, KOMPUTER DAN DESAIN
TEKNIK INFORMATIKA

NIM   : 20220040001

NAMA MAHASISWA : HARI MUHAMMAD RAMDAN

KELAS   : TI22B

MATA KULIAH   : PENGOLAHAN CITRA DIGITAL

PRAKTIKUM SESI   : 5, 6

1. Buatlah program untuk pemrosesan citra digital seperti gambar-gambar berikut ini:

   a. Translasi Citra

```python
import imageio.v3 as img
import numpy as np
import matplotlib.pyplot as plt

def Translasi(image, shiftX, shiftY):

    imgTranslasi = np.roll(image, shift=shiftY, axis=0)  # Geser vertikal
    imgTranslasi = np.roll(imgTranslasi, shift=shiftX, axis=1)  # Geser horizontal

    # Mengisi bagian yang kosong dengan warna hitam (0)
    if shiftY > 0:
        imgTranslasi[:shiftY, :] = 0  # Bagian atas jika geser ke bawah
    elif shiftY < 0:
        imgTranslasi[shiftY:, :] = 0  # Bagian bawah jika geser ke atas
    if shiftX > 0:
        imgTranslasi[:, :shiftX] = 0  # Bagian kiri jika geser ke kanan
    elif shiftX < 0:
        imgTranslasi[:, shiftX:] = 0  # Bagian kanan jika geser ke kiri

    return imgTranslasi

image = img.imread("/users/alunsujjada/downloads/tiger.jpg")

imgResult = Translasi(image, shiftX=50, shiftY=-300)

plt.figure(figsize=(10,10))
plt.subplot(2,1,1)
plt.imshow(image)
plt.subplot(2,1,2)
plt.imshow(imgResult)
plt.show()
```

b. Mirroring

```python
import numpy as np
import imageio as img
import matplotlib.pyplot as plt

path = 'D:\\source.jpg'
image = img.imread(path)

height, width = image.shape[:2]
horizontal = np.zeros_like(image)
vertical = np.zeros_like(image)

for y in range(height):
    for x in range(width):
        horizontal[y, x] = image[y, width - 1 - x]

for y in range(height):
    for x in range(width):
        vertical[y,x] = image[height - 1-y,x]

plt.figure(figsize=(10, 5))

plt.subplot(1, 3, 1)
plt.imshow(image)

plt.subplot(1, 3, 2)
plt.imshow(horizontal)

plt.subplot(1, 3, 3)
plt.imshow(vertical)

plt.show()
```

c. Rotasi Citra

```python
import imageio as img
import numpy as np
import matplotlib.pyplot as plt

def rotateImage(image,degree):
    radian_deg = np.radians(degree)
    cos_deg, sin_deg = np.cos(radian_deg), np.sin(radian_deg)

    height, width = image.shape[:2]
    max_dim = int(np.sqrt(height**2 + width**2))
    outputImage = np.zeros((max_dim,max_dim,3),dtype=image.dtype)

    centerY, centerX = max_dim//2, max_dim//2

    for y in range(-height//2,height//2):
        for x in range(-width//2,width//2):
            newX = int(cos_deg * x - sin_deg * y) + centerX
            newY = int(sin_deg * x + cos_deg * y) + centerY

            if 0 <=newX <  max_dim and 0 <= newY < max_dim:
                outputImage[newY,newX] = image[y + height//2, x + width//2]
    return outputImage

image = img.imread('D:/source.jpg')

rotated_image = rotateImage(image, 45)

plt.subplot(1, 2, 1)
plt.imshow(image)

plt.subplot(1, 2, 2)
plt.imshow(rotated_image)

plt.show()
```

d. Zooming

```python
import numpy as np
import imageio as img
import matplotlib.pyplot as plt

def zoomPlus(image, factor):
    height, width = image.shape[:2]
    new_height = int(height / factor)
    new_width = int(width / factor)
    imgZoom = np.zeros((new_height, new_width, 3), dtype=image.dtype)

    for y in range(new_height):
        for x in range(new_width):

            ori_y = int(y * factor)
            ori_x = int(x * factor)

            ori_y = min(ori_y, height - 1)
            ori_x = min(ori_x, width - 1)

            imgZoom[y, x] = image[ori_y, ori_x]

    return imgZoom

image = img.imread('D:\\source.jpg')
skala = 2.0

imgZoom= zoomPlus(image, skala)
img.imwrite("D:\\z.jpg",imgZoom)
plt.subplot(1, 2, 1)
plt.imshow(image)

plt.subplot(1, 2, 2)
plt.imshow(imgZoom)
plt.show()
```

2. Ubahlah kode program tersebut yaitu

    a. Mirroring untuk vertical dan horizontal dilakukan secara bersamaan

    b. Rotasi Citra menggunakan pivot di titik (0,0) pojok kiri atas

    c. Zoom Minus untuk memperkecil gambar.
